

SUPERSEAL

Brushstrip

Standard range

Superseal range brushstrip is manufactured in hardwearing nylon filament, encased in an electroplated steel channel. Standard range brushstrip can be used to seal, guide, protect or clean in a variety of environments

Features	
•	Eight nominal section sizes
•	2m, 2.5m and 3m standard lengths
•	Trim heights up to 230mm
•	Modified lengths and trims available on request

Light duty

Type	Section dim		Trim D	Fill material	Part number

All dimensions are in mm

How to specify

Select the required brush height (D) and thickness according to the size of gap to be sealed.

For modified products, select the standard part number and specify:

- ▶ Modified length (A)
- ▶ Brush trim (D)

Technical notes

Cutting to length

Superseal should be cut to length with side action croppers to ensure the ends are completely resealed and avoid spillage of the filaments.

Aluminium carriers (where supplied) should be cut with a fine tooth saw and deburred. File a lead-in at one end of the carrier to aid assembly of the brushstrip.

Fitting

Superseal products should be fitted with the tips of the filaments in firm contact with the mating surface but barely flexed. Fixings should be positioned within 50mm of each end and at 300mm centres thereafter.

Superseal brushstrip is also available in a range of aluminum carriers
